

Midterm Exam
International Campus, MD Program
Anatomy of the Lower limb
February semester 2024

Name and Surname:

Student ID Number:

Course Coordinator: Dr. Kashani

Date of Exam: Jul 10, 2024

Duration of Exam: 20 Minutes

MCQ Question	20
--------------	----

Directions:

- Each of the following questions contains one correct answer only.
- Please choose the correct answer for the MCQs in the answer sheet with pencil.

1. The femoral nerve arises from which of the following segments of the spinal cord?

- A. L2 and L3
- B. L4 and L5 and S1, S2, and 3
- C. L2, L3, and L4 ✓
- D. L1 and L2

2. A patient in the supine position with the hip and knee joints extended is asked to abduct the limb against resistance provided by the physician; this exercise tests which of the following muscles?

- A. The semitendinosus muscle
- B. The gluteus medius muscle
- C. The pectineus muscle
- D. The gracilis muscle ✓

3. They all the following statements about the sartorius muscle are correct except which?

- A. It flexes the leg at the knee joint.
- B. It flexes the thigh at the hip joint.
- C. It is innervated by femoral nerve.
- D. It adducts the thigh at the hip joint. ✓

4. The common peroneal nerve can be palpated in which region of the knee?

- A. As it winds around the medial condyle of the tibia.
- B. As it passes around the lateral condyle of the tibia. ✓
- C. As it winds around the lateral side of the neck of the fibula.
- D. As it passes forward between the tibia and the fibula. ✓

5. The following statements regarding the obturator nerve are correct except which?

- A. It originates from the lumbar plexus. ✓
- B. It enters the thigh beneath the inguinal ligament. ✓
- C. It innervates the adductor muscles of the thigh. ✓
- D. It supplies the skin on the medial side of the thigh. ✓

6. Which muscle does not laterally rotate the hip joint?

- A. Obturator internus
- B. Gluteus minimus
- C. Quadratus femoris
- D. Obturator externus ✓

7. Which of the following structures are NOT found in the adductor canal?

- A. Femoral artery
- B. Femoral vein
- C. Femoral nerve. ✓
- D. nerve to vastus medialis

men except which?
with excessive
to be torn?

Which statement about the gluteus maximus muscle is true?

- A. inserts only on to the femur.
- B. is a flexor of the hip joint.
- C. is innervated by inferior gluteal nerve. ✓
- D. has an origin from ischial tuberosity.

9. Which vessel is NOT involved in the cruciate anastomosis?

- A. superior gluteal artery
- B. inferior gluteal artery
- C. lateral circumflex femoral artery. ✓
- D. medial circumflex femoral artery

10. Regarding the popliteal vessels, which following statement is true?

- A. the tibial nerve lies between the popliteal artery and vein. ✓
- B. the middle genicular artery supplies the cruciate ligaments.
- C. the popliteal artery enters the fossa on the lateral side of the femur. ✓
- D. the popliteal vein runs anterior to the popliteal artery.

11. Rupture of the tendon calcaneus results in an inability to do what?

- A. Dorsiflexion the foot
- B. Evert the foot
- C. Invert the foot. ✓
- D. Plantar flexion the foot.

12. The dermatome present over the lateral side of the foot is which of the following?

- A. L5
- B. L3
- C. S1. ✓
- D. L4

13. Injury to the common peroneal nerve results in which condition?

- A. Inability to evert the foot.
- B. Inability to plantar flexion the ankle. ✓
- C. Inability to feel skin sensation on the medial side of the leg.
- D. Inability to flexion the big toe.

14. The gastrocnemius and the soleus muscles have all the following features in common except which?

- A. They are supplied by the tibial nerve.
- B. They are found in the posterior compartment of the leg and plantar flex the ankle joint.
- C. They arise from the femoral condyles and flex the knee joint. ✓
- D. They insert via the tendon calcaneus.

15. The following structures are transmitted through the lesser sciatic foramen except which?

- A. The inferior gluteal artery ✓
- B. The internal pudendal vessels
- C. The nerve to the obturator internus muscle
- D. The pudendal nerve

16. After a football injury, the right tibia of the patient could be moved anteriorly with excessive freedom when the knee was flexed. In this patient, which ligament is most likely to be torn?

- A. The lateral collateral ligament
- B. The posterior cruciate ligament
- C. The anterior cruciate ligament
- D. The medial collateral ligament ✓

17. Which statement about the semimembranosus muscle is FALSE?

- A. It extends at the hip joint.
- B. It attaches to ischial tuberosity and medial condyle of the tibia
- C. It flexes at the knee joint
- D. It forms superior lateral boundary of popliteal fossa ✓

18. The anterior part of talus articulates with the:

- A. cuboid
- B. navicular
- C. calcaneus ✓
- D. medial cuneiform

19. Which of the following structures attaches to the most anterior part of the inter condylar area of tibia?

- A. anterior cruciate ligament ✓
- B. posterior cruciate ligament
- C. medial meniscus
- D. lateral meniscus

20. Regarding the muscular layers on the sole of the foot, which statement is INCORRECT?

- A. lumbricals lies in second layer
- B. abductor digiti minimi lies in first layer
- C. adductor hallucis lies in third layer ✓
- D. flexor hallucis brevis lies in first layer

which statement about
A. inserts only on to t
B. is a flexor of the hip
C. is innervated by
D. has an origin
9. Which
A

الاجابة

How to Mark: wrong ☐ ☐ ☐ ☐ ☐

Attention:

- 1- If this answer sheet is not yours, Please inform the responsible person.
- 2- The answers should be marked with a soft and bold black pencil in the appropriate box.

Please don't write anything in
