

Place the name of the course or test		Question time (seconds): →
1	All the following is true regarding Electrophoresis Except:	
	1	It's a separation technique
	2	based on the differential migration
	3	uses an electric field
*	4	uses uncharged molecules
Source:		
Description:		

Place the name of the course or test		Question time (seconds): →
2	All the following factors affect the rate of Ion mobility in electrophoresis except :	
	1	The net charge of the molecule
	2	Size and shape of the molecule
	3	Temperature and pH of the buffer
*	4	The mobile phase used
Source:		
Description:		

3	Electrophoresis is an analytical method which can not be used for separation of :	
	1	amino acids
	2	peptides
	3	nucleic acids
*	4	lipids
Source:		
Description:		

4	In DNA extraction why soap solution is used?	
*	1	To break the cell membrane
	2	To find the amount of DNA
	3	To make the saliva watery
	4	To decrease the heat
Source:		
Description:		

5	In DNA extraction where does the DNA in saliva come from?	
*	1	cells in the cheeks
	2	lung secretions
	3	nose secretions
	4	sputum
Source:		
Description:		

6	In a titration experiment how do we know the end point has reached?	
	1	With an acid
	2	With a base
*	3	Using indicators
	4	Measuring pH
Source:		
Description:		

7	In titration when do we add the indicators?	
*	1	In the beginning of titration
	2	In the end of titration
	3	Sometimes it is added
	4	In the middle of titration
Source:		
Description:		

8	Flame Photometry is for determining:	
*	1	Concentration of metal ions
	2	Concentration of colored solutions
	3	Concentration of liquids
	4	Concentration of organic solutions
Source:		
Description:		

9	Which of the following is used in inorganic chemical analysis ?	
	1	Chromatography
*	2	Flame Photometry
	3	Spectrophotometry
	4	Colorimetry
Source:		
Description:		

10	What of the following is the <u>Qualitative test</u> for protein detection in urine?	
*	1	Biuret
	2	Hopkin's Cole
	3	Urease
	4	Ninhydrin
Source:		
Description:		

11	Which of the following is the <u>Qualitative test</u> for sugar detection in urine?	
*	1	Benedict's test
	2	Rothera's test
	3	Sulphosalicylic Test
	4	Sodium Nitroprusside
Source:		
Description:		

12	Which glassware is used for preparing accurate volume of a solution?	
	1	Beaker
	2	Conical flask
*	3	Volumetric flask
	4	Cylinder
Source:		
Description:		

13	What is the difference between serum and plasma?	
	1	Plasma doesn't contain cells
	2	Serum contains cells
	3	Plasma contains coagulant
*	4	Serum doesn't contain clotting factors
Source:		
Description:		

14	Lipemic serum appears	
*	1	Milky
	2	Pink
	3	Red
	4	Yellow
Source:		
Description:		

15	HbA1c levels reflect	
	1	average blood glucose concentrations during the previous 2 to 3 weeks
	2	average blood glucose concentrations during the previous 4 to 6 weeks
*	3	average blood glucose concentrations during the previous 8 to 12 weeks
	4	average blood glucose concentrations during the previous 16 to 24 weeks
Source:		
Description:		

16	What is the amount of HbA1c in a normal person?	
*	1	Less than 5.6%
	2	Less than 6.6%
	3	Less than 7.6%
	4	Less than 8.6%
Source:		
Description:		

17	What is the normal range for Specific gravity of urine?	
	1	1.011-1.012 gm/ml of urine
*	2	1.003- 1.035 gm/ml of urine
	3	1.015-1.017 gm/ml of urine
	4	1.020-1.023 gm/ml of urine
Source:		
Description:		

18	Which of the following is used for separation of DNA particles?	
*	1	Agarose-gel chromatography
	2	Ion-exchange chromatography
	3	Paper chromatography
	4	gas-liquid chromatography
Source:		
Description:		

19 Which of the following flasks hold solids or liquids that may release gases?

* 1 Erlenmeyer

2 Beaker

3 Round bottom flask

4 Volumetric Flask

Source:

Description:

20 Stir rods are long cylinders made of:

* 1 Glass

2 Metal

3 Steel

4 Silver
